

Eval-50 hallucination scan

Sessions analysed: 50

Detection categories

- A. Ungrounded titles - film/book/song names Maya put in italics or "quotes" that the user never mentioned and aren't in stored memory.
- B. Ungrounded named entities - celebrities/cricketers/actors mentioned without user introducing them and not in memory.
- C. Personal-experience claims - first-person statements ("I just watched X", "I went to my nani's") that risk Rule 35 biography fabrication. Note: Rule 35a allows low-stakes preferences ("I'm a tea person"), so each claim needs human review - this is a pattern flag, not a confirmed violation.
- D. Fake quoted user text - You said "X" where X doesn't appear in the user's actual messages.
